横趟式开关卷闸是专为那些店铺顶部空间细小、或者是有弧形行程的卷闸，或者是跨度特大的卷闸而采用的一种卷闸开关装置。秀丽 II 型及秀丽 II s 型横趟开关卷闸，具备了所有秀丽 II 型及秀丽 II s 型卷闸的安防、透视、透气等优点，也解决了上述安装垂直开关卷闸遇到的难题。

我们的横趟式开关卷闸有一套与别不同的传动机构，使秀丽 II 型及秀丽 II s 型横趟式卷闸开关时特别畅顺，特别宁静，值得一提的是：这套独特的开关机构使卷闸全开时，收藏卷闸帘页的箱体所占的面积特别细小，这个优点在寸金尺土的贵重物业商铺中，非常重要，因为：箱体占用的空间愈小，铺面可用的空间就愈多。

Laterally operation is especially designed for location with limited headroom, curved running path and long span shutters. CS II and CS IIs laterally sliding roller shutters can fit location with above mentioned properties at the same time providing all the excellences of CS II and CS IIs vertically sliding roller shutters.

Our unique power transmission system is designed by our group of experienced engineers, this system help making our CS II and CS IIs shutter runs in a quiet and smooth way, it also brings a diminution of enclosure size. Providing more spare space is very remarkable in high-rent places like Hong Kong, no wonder our clients are pleased with our CS II and CS IIs laterally sliding roller shutters.
