

秀丽 II s型聚碳酸酯帘页是我们引以为傲的产品之一，聚碳酸酯帘页在注塑成型的过程中，每件帘页上留有六条细小的，平衡的透气孔，帘页首尾相连后，透气孔呈现了一组又一组等长的，平衡的线条，构成简约而美观的图案。细小的透气孔，小得不能让成人的手掌穿过，但每件帘页留有24%的透气面积。为了保持聚碳酸酯帘页的刚度，我们在细小透气孔的周围加固了一条厚1mm的围边，使透气孔围边的总厚度达4mm厚，大大增强秀丽 II s型帘页的抗撕裂和抗撞击能力。秀丽 II s型卷闸帘页集透视、透气、美观、安防及高刚度於一身，市场上并无其他产品能与伦比。

We are proud to introduce our CS IIs polycarbonate panel. In the moulding process, each panel has six small oval-shaped holes. When all the panels are connected, you can see groups of parallel lines making some beautiful pattern, and they are simply composed of the oval-shaped holes. Those small oval-shaped holes are even smaller than our palms, while they bring 24% airflow to our polycarbonate panels. To maintain stiffness of the panels, we add a 1mm thickness rim around all the small oval-shaped holes, which makes the total thickness into 4mm. This strongly increases the tensile strength and impact resistance. Our CS IIs shutters are transparent, ventilative, elegant, solid and durable. This is one of the most extraordinary products in the shutters market.
